

Setting restrictions on Apple devices

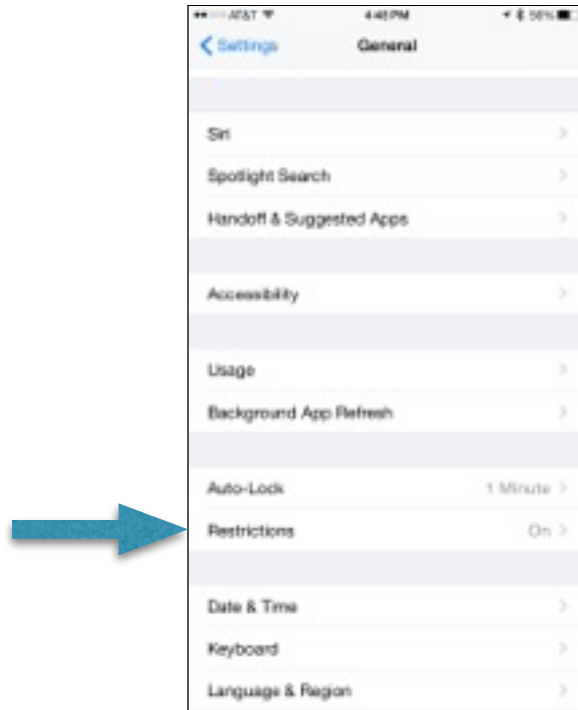

1. locate and launch the Settings app.

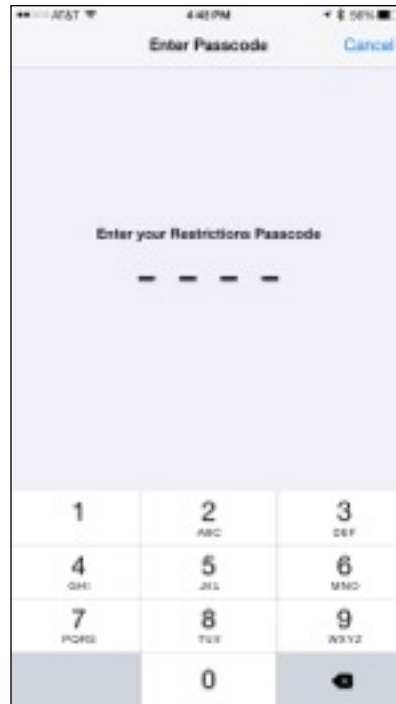

2. Tap “General”

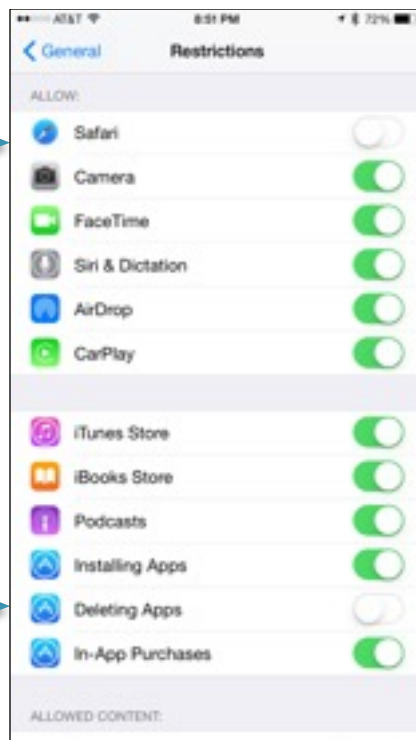

3. Tap “Restrictions”

4. Choose a 4 digit passcode you will remember.

5. Find “Safari” and move the slider to the off position.

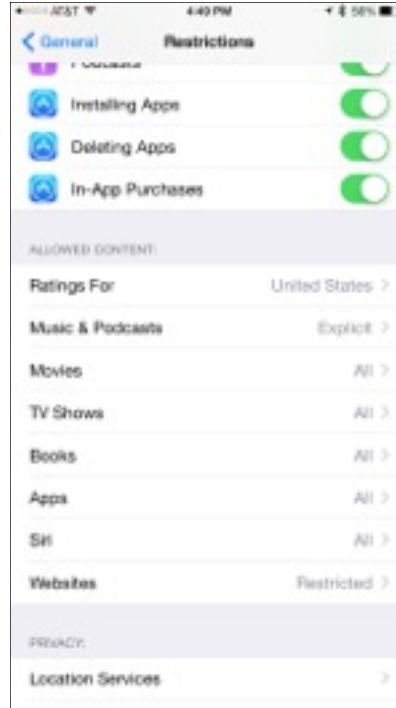

6. Find “deleting apps” and move the slider to the off position as shown. This will allow your child to download apps but not delete them from the device.

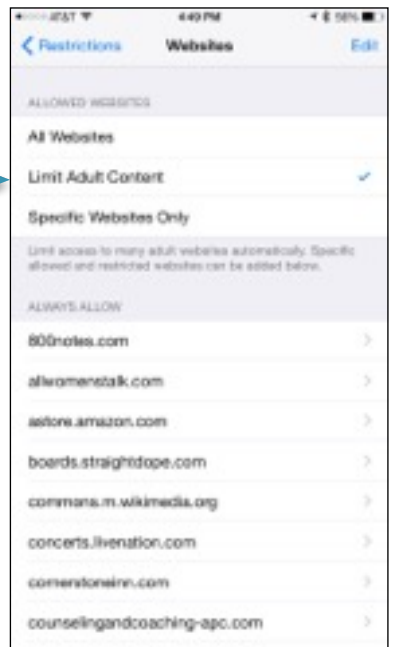

Why remove the ability to delete apps you ask? With this technique, any app they download cannot be deleted. We believe it is good to let the kids download new apps, then parent should perform regular inspections on what they've downloaded and if you notice anything inappropriate, that's when you can speak to them about it.

7. Choose the rating limitations you'd like your child to have access to for "music & podcasts", movies, TV shows, etc.

8. Click "Websites"

9. Select "limit adult content".

10. Download the app "K9 Browser" from the app store. This is a safe web browser and will allow your child to view safe web sites only.
